# TONIC

We are digitally connected in ways that have profoundly changed the way we work. Tonic is the simple and agile bench for today's generations.

## WHY TONIC

---

On a 2010 European trip to interview furniture designers, we observed strangers connecting with each other at common tables in the cafes of Amsterdam. And we got it: the reason our clients had been asking us to convert our desks to benches was so their people would connect.

Many organizations believe that benching environments encourage connectivity and knowledge transfer. Mentoring is easier in more open environments, with a bench being the most open of all.

Tonic was designed for clients who are moving to benching and want a more agile asset. Simple and clean in design, Tonic is built with the quality that is distinctively Watson.

# SUPER SIMPLE BENCHING

---

Tonic is a collection of benches, storage and tables for clients who want agility, simplicity and clean design, with the robust construction Watson is known for.

## Simple, Clean Design

San Francisco-based designers Mike & Maaiké designed Tonic to be uncluttered, clean and approachable. With a West Coast meets Europe sensibility – he's from L.A. and she's Dutch - Mike & Maaiké have designed innovative products for progressive companies such as Google, Belkin and Council.

## Simple Specification

Tonic was designed with the specifier in mind. Specify your bench quickly by following five simple steps (and do it without compromising the choices you want): 1. Select your bench segment size from two depths and four widths. 2. Indicate how many people will sit at your bench. 3. Select an end treatment. 4. Choose standard or light power. 5. Then pick your center deck components and you're on your way.

### **Simple Installation**

Time is money, especially at an installation site. Coordinating trades is complex enough—furniture shouldn't burden installation pros with parts-intensive designs that shift manufacturing costs to installers. Tonic is designed with installation in mind, and includes a time (and back) saving leveling mechanism accessed from the top of the table. Brass threaded inserts provide metal to metal connections that ensure the quality of your third reconfiguration will be as good as your first installation.

### **Robust Construction**

When we asked facility managers why they were specifying Watson desks and tables as benches, they mentioned our robust construction. It isn't just the 1-1/8" thick worksurfaces and 12 gauge steel yoke that makes Tonic strong and durable, but also the way we engineered it for optimal strength-to-weight ratio. Warrantied for life because Tonic is completely made in our own facility and designed to last forever.

# CENTER DECK FLEXIBILITY

---

At the heart of each Tonic configuration is its versatile center deck. This modular strip serves as the landing zone for flush-mounted infills and helps determine the personality of your bench. Choose from flat, pallet, cube or screen infills, and add the Neighborhood Light to brighten your workspace with a warm glow.

## Flat Infills with Neighborhood Light

Create a single expansive surface with Flat Infills. Anchor the bench with color-balanced and dimmable LED Neighborhood Lights.

## Multiple Zone Planning

Tonic is the first bench to allow multiple zone planning. Position Media Fill anywhere (and in either direction) to delineate your conference space.

# APPLICATION LANDSCAPE

---

Choose Tonic elements to build just the right work setting. Combine power, storage, privacy, and media display options for the organization you are today. As business changes, so can Tonic - easily.

## Center Screens and Side Screens

Center Screen infills provide privacy between users. Available in two heights, 9" and 14", screens are fully tackable and may be finished in Watson's 100% recycled PET. Tonic Side Screens slide into place to create adjacent heads-down privacy.

## Maximum Storage Above

Infill Cube and Shadow Boxes combine space division across the bench with desktop storage. Use them for stand alone binder storage or add steel bins for filing or piling.

# NEIGHBORHOOD LIGHT

---

Elegantly add a warm glow to your workplace with a pool of LED light. The Tonic Neighborhood Light is a cool companion, lending color-balanced illumination to your people and their ideas.

# END OF RUN

Expand your workspace or create a meeting space by adding a Conference End, available in three widths. When extending your bench from the wall, buffer the junction with Tonic's 4" Wall End.

**Truss Tall Storage End**

**Truss Low Storage End**

## POWER FULL & DATA RICH

Unfettered access and abundant capacity describes Tonic power and data. Choose between 8 and 16 outlets per segment, and separate facility and user power access using Tonic's above-and-below worksurface access ports. Tonic's Data Bay is a four lane freeway for lay-in cable management, employing removable slats for tucking cables away neatly. Termination at up to eight data plate knock outs per segment is easy and secure. Tonic even has a single circuit plug-in option for those who can't wait to get connected.

### I.T. Will Love This

Factory-assembled power cartridges simply drop into place at installation, and modular connectors distribute power between segments. Hard-wire from a wall, floor, or ceiling interface for four-circuit power, or supply a single circuit with Tonic's simple plug-in option.

Above-surface power access

Removable cable slats make lay-in cabling easy.

# TECH-FRIENDLY

---

Tonic offers a natural and easy place for video conferencing or media display. Media Fill can be docked at the team Conference End or at intervals along the center deck for larger meeting functions. The media infill contains four easy-access outlets on its face and accommodates a wiring chase through the housing.

## Media Fill and Media Fast

Give technology a seat at the table. Media display is available in both infill and portable clamp-on versions. Attach Media Fast to most Watson tables or worksurfaces and use its cable management clamp to cleanly route data and power beneath the table. A 7" x 14" routing box backs up the display with plenty of space for cables and connectors, and an optional lock keeps it all secure.

# PERSONAL STORAGE

For personal items that need to be tucked away, Tonic storage provides users with secure spaces above and below the worksurface. Credenza options include open shelves, doors, and drawers. Tonic Trolleys provide both open and closed compartments in one mobile unit, and Tonic bins are perfect for grab and go items.

## Trolley

A new way to store the things we use, the Tonic Trolley's sliding top conceals hanging files and a PET-cushioned hideaway right for your smart phone or supplies. Handbags, backpacks or larger objects neatly tuck away in a large open space below. Top your Trolley with a cushion and invite your colleague to stay a while.

## Credenza

Where more storage or surface area is needed, Tonic Credenzas fit the bill (and the space with their 15" depths). Tailor your design with optional stackers and bases. Add some of the same Tonic bins used on the bench, and you're smartly organized. Watson thought of the wiring pass-throughs too. So when it's time to tuck away your phone charger you'll be pleasantly surprised.

# TONIC SIMPLE TABLES

---

Complement Tonic benching with an assortment of meeting tables in square, rectangular and round shapes. With Media Fast displays, whiteboard center surfaces and power module drop-in options, Tonic Simple Tables add inspiration and utility.

## Please Pass the Idea

Inspired by shared dining, this Tonic Simple Table will draw a crowd. With a full markerboard surface and rotating center, this round table fuses utility and motion.
